1. Overview

EASA App is a compliance and training platform purpose-built for **Approved Training Organisations (ATOs)** operating under EASA (European Union Aviation Safety Agency) regulations. It replaces the patchwork of PDFs, Word documents, spreadsheets, and email chains that most flight schools use to manage regulatory updates and training acknowledgements.

The platform creates a single, auditable chain from an incoming EASA regulatory change all the way through to every instructor and student confirming they have read and understood the updated procedure — so your school is always audit-ready.

Core value proposition

- Automatically detects EASA regulatory changes via RSS feeds
- Uses AI to flag which sections of your manuals are affected and drafts plain-language replacements
- Routes approved updates to the right people for reading and acknowledgement
- Generates a full, timestamped approval trail for every change
- Mobile-friendly so students and instructors can act from anywhere

Four-step workflow

01 Monitor EASA changes

Regulatory updates from EASA are automatically detected, summarised by AI, and surfaced in your compliance queue.

02 Review and approve

Your team reviews the AI's recommended changes side-by-side with your existing manual text. Approve, edit, or reject.

03 Assign reading

Distribute approved updates to the right instructors and students based on programme, lesson stage, or aircraft type.

04 Track acknowledgements

See exactly who has read, acknowledged, and completed required action — before the next lesson or audit.

2. User Roles & Permissions

EASA App uses a role-based access system. Every user in your organisation is assigned one of the following roles. Roles control what each person can see, edit, and approve.

Admin	Full access	Complete control over the platform. Can invite users, configure RSS feeds, manage AI settings, set automation rules, customise branding, and access all data. Typically the Head of Compliance or IT administrator.
Editor	Read + write	Can create and edit content — flight books, training programmes, update queue items — but cannot access admin settings or invite users.
Compliance Manager	Read + approve	Focused access to the compliance workflow: can review regulation changes, approve or reject AI-generated manual updates, and export audit reports. Cannot manage users or system settings.
Instructor	Read + sign-off	Sees all current approved procedures and lesson-linked documents. Can acknowledge assigned reading items and complete sign-offs. Cannot edit manuals or approve regulatory changes.
Student	Read + acknowledge	Read-only access to assigned material. Can acknowledge updates and reading assignments from any device. Receives notifications when new material is assigned.
Viewer	Read-only	Can view dashboards and documents but cannot take any action. Useful for observers, auditors, or regulators during an inspection.

Note: The Settings page (Admin Panel) is only visible to users with the **Admin** role. Other roles will not see the Settings link in the navigation sidebar.

3. Navigation

All pages are accessible from the left-hand sidebar (desktop) or the hamburger menu (mobile). The navigation adapts to your role — admin-only items are hidden for non-admin users.

Dashboard	Your compliance command centre. Shows live stats, recent changes, and items requiring action.
Update Queue	The queue of EASA regulatory updates waiting for your team to review and approve.
Change List	A full log of every EASA regulatory change detected, grouped by regulation Part.
Flight Books	Your library of aviation manuals and training documents. Upload, version, and manage them here.
Search	Full-text search across all your flight books and regulatory content.
Training	Manage training programmes, phases, lessons, reading assignments, and sign-off records.
Update (Upload)	Upload new versions of flight book documents or import PDFs directly into the system.
Time Machine	Browse the complete version history of every flight book section. Restore previous versions.
AI Results	View the raw output of the AI RSS ingestion pipeline: all parsed updates before they enter the queue.
Profile	Manage your personal account details, password, and notification preferences.
Notifications	All alerts and activity notifications for your account, including new assignments and approvals.
Settings	(Admin only) Full admin panel: users, sources, AI config, automation, branding, exports, and onboarding.

4. Dashboard

The Dashboard is the first page you see after logging in. It gives a real-time compliance overview of your organisation, surfacing everything that needs attention without requiring you to dig through individual sections.

Stat cards

Across the top of the dashboard are four live stat cards:

Unread critical updates	The number of high-priority EASA changes that have not yet been reviewed. A red indicator means immediate attention is needed.
Students pending acknowledgement	How many students still have open reading assignments that they have not yet acknowledged.
Instructors pending sign-off	The number of instructors who have training items waiting for their sign-off or acknowledgement.
Lessons affected by recent changes	Lessons within the last 14 days that have been impacted by a regulatory change — useful for scheduling briefings.

Role focus panel

Below the stat cards, the **Role Focus Panel** adapts to your user role, surfacing the most relevant actions. An Admin sees the full compliance picture; an Instructor sees their pending acknowledgements; a Student sees their reading list.

Update queue preview

A condensed view of the top five items in the update queue. Click any item to jump directly to the full review screen. Clicking **View all** takes you to the complete Update Queue page.

Pipeline health

A status indicator showing whether the automated RSS ingestion pipeline ran successfully on its last scheduled run. States include: **OK** (green), **Warning** (amber), and **Error** (red). If red, check the RSS Feeds settings or contact your administrator.

Setup assist card

Shown to Admin users when the organisation setup is incomplete. It lists remaining steps such as adding RSS feeds, uploading a first flight book, and inviting team members. The card disappears once setup is complete.

5. Update Queue

The Update Queue is the primary review workspace for Admins, Editors, and Compliance Managers. Every EASA regulation change detected by the ingestion pipeline lands here as a queue item awaiting review.

How to review a queue item

01 Open the item

Click on any item in the queue to open the full detail view. You will see the regulation reference, the change type (new text, amendment, or deletion), and the AI-generated plain-language summary.

02 Review the AI recommendation

The AI flags which sections of your flight book manuals are affected and drafts a plain-language replacement for the changed regulation. Review this recommendation carefully.

03 Approve, edit, or reject

Use the action buttons to Approve the AI recommendation as-is, Edit it before approving (the edited version becomes the official change), or Reject it if the change does not apply to your operation.

04 Assign reading

After approving, select the instructors and/or students who need to read and acknowledge the update. You can assign by programme, lesson stage, or individually.

05 Monitor acknowledgement

Return to the Dashboard or the Training section to track who has and has not yet acknowledged the assigned reading.

Change types

Amendment	An existing regulation has been modified. Text has changed.
New	A completely new regulation, article, or acceptable means of compliance has been introduced.
Deletion	A regulation or section has been removed from the applicable framework.
Clarification	Guidance material or explanatory text has been updated without a substantive rule change.

6. Change List

The Change List is a comprehensive, filterable log of every EASA regulatory change ever detected by the system. Unlike the Update Queue (which shows items awaiting action), the Change List is a permanent record — useful for audit preparation and historical review.

Filtering

Use the filter controls at the top of the page to narrow the list by **Regulation Part** or **Change Type**. Multiple filters can be active at once. Clear all filters to see the full history.

EASA Regulation Parts

Changes are grouped by the EASA regulation Part they belong to. The following Parts are tracked:

Part-FCL	Flight Crew Licensing — rules for pilot licences, ratings, and certificates.
Part-MED	Medical — medical certification requirements for flight crew.
Part-ORO	Organisation Requirements for Air Operations — operational organisation standards.
Part-ORA	Approved Training Organisations — requirements specifically for ATOs like yours.
Part-ARO	Authority Requirements for Air Operations — rules for competent authorities.
Part-M	Continuing Airworthiness — maintenance and airworthiness management.
Part-145	Maintenance Organisation Approvals.
Part-CAT	Commercial Air Transport — rules for commercial passenger and cargo operations.
Part-NCO	Non-Commercial Operations with Other-than-complex aircraft.
Part-ADR	Aerodromes — standards for aerodrome design, operations, and safety.
Part-ATM/ANS	Air Traffic Management and Air Navigation Services.

AI confidence and impact

Each change item may include an AI-assessed **Impact** level (High, Medium, or Low) and a **Confidence** score, indicating how certain the AI is about the relevance of this change to your organisation. Use these as triage guides, not definitive assessments — always apply human judgement.

7. Flight Books

Flight Books are the aviation manuals, training documents, and procedure guides that form the content library of your ATO. EASA App stores them as structured, versioned documents so that every change is traceable and every section can be linked to training lessons.

Document types

Training Manual	The core ATO manual covering theoretical and practical training content.
Operations Manual	Operational procedures for the organisation and its aircraft.
Maintenance Manual	Aircraft maintenance and airworthiness documentation.
Check List	Procedural checklists for pre-flight, in-flight, and emergency use.
Acceptable Means	EASA Acceptable Means of Compliance (AMC) documents.
Other	Any supplementary documents specific to your operation.

Uploading a flight book

- 01 Go to Upload**
Click **Update** in the left-hand navigation to reach the upload page.
- 02 Select your file**
Drag-and-drop or click to select a PDF or Word document from your computer.
- 03 Fill in metadata**
Enter the document name, document type, version label, applicable aircraft type (if relevant), and effective date. Add tags for easier filtering later.
- 04 Submit**
Click **Upload**. The system processes the document, extracts text, and makes it searchable. The new version appears in Flight Books.

Managing flight books

- Click any flight book in the list to open its section browser.
- Each document is broken into sections. Sections can be individually linked to training lessons.
- The **version label** and **effective date** fields allow you to maintain a clear document history.
- Deactivate (rather than delete) old documents to preserve audit trails.
- Use **manual group** and **tags** to organise documents by fleet, programme, or topic.

8. Search

The Search page provides full-text search across all your flight book sections and regulatory content. Use it to quickly locate a procedure, find all references to a specific regulation, or cross-reference content before an audit.

- Type any keyword, regulation reference (e.g. *FCL.015*), or phrase into the search bar.
- Results are ranked by relevance and show the source document, section title, and a text excerpt.
- Click any result to open the full section in context.
- Search is available to all roles.

9. Training

The Training section is where you structure your ATO's training programmes and manage the reading, acknowledgement, and sign-off workflow for instructors and students.

Training hierarchy

Programme	The top-level training course — e.g. PPL(A), ATPL(A), IR(A). An ATO may run multiple programmes simultaneously.
Phase	A stage within a programme — e.g. Ground School, Basic Flying, Advanced Flying. Phases run in sequence.
Lesson	An individual lesson within a phase — e.g. Lesson 1: Air Law. Lessons contain reading assignments and sign-offs.
Assignment	A specific flight book section (or set of sections) assigned to a student or instructor to read for a lesson.
Sign-off	A formal confirmation by an instructor that a student has completed the learning objective for a lesson.
Acknowledgement	A student's or instructor's recorded confirmation that they have read and understood an assigned item.

Creating a training programme

- 01 Open Training**
 Click **Training** in the sidebar, then select **Training programmes**.
- 02 Create a programme**
 Click **New programme**. Enter the programme name (e.g. PPL(A)) and save.
- 03 Add phases**
 Inside the programme, click **Add phase**. Name each phase and set the order.
- 04 Add lessons**
 Within each phase, click **Add lesson**. Give it a title, lesson number, and optional description.
- 05 Assign reading**
 Inside each lesson, click **Add reading assignment**. Select the relevant flight book section(s) and choose which students or instructor groups should receive them.
- 06 Add sign-offs**
 Add sign-off tasks for the instructor to complete after the lesson. Sign-offs appear in the instructor's pending items on the Dashboard.

Tracking acknowledgements

Navigate to **Training > Acknowledgements** to see a full matrix of who has acknowledged which assignments. Filter by programme, phase, or individual student. Export to PDF or CSV for record-keeping.

Managing sign-offs

Navigate to **Training > Sign-offs**. Instructors see their pending sign-off tasks here. Clicking a task opens the student record and allows the instructor to record the sign-off with a timestamp. All sign-offs are immutable once recorded.

10. Time Machine

The Time Machine page gives you a complete version history of every flight book section in the system. Every time a section is edited or a new document is uploaded, a new version is recorded automatically.

- Browse the full list of version events, sorted by most recent first.
- Each entry shows the section name, version number, the source of the change (manual edit or AI-generated), and the timestamp.
- Admin users can compare versions or restore a previous version if a change needs to be reversed.
- The Time Machine provides the audit trail required by EASA for document control.

Audit tip: The Time Machine is the first place an EASA auditor will want to see during a document control audit. Ensure your version labels and effective dates are filled in accurately on every upload.

11. AI Results

The AI Results page shows the raw output of the EASA RSS ingestion pipeline before any items have been reviewed or routed to the Update Queue. It is primarily useful for Admins and Compliance Managers who want to see what the AI has parsed from the EASA RSS feeds in a given ingestion run.

- The page header shows the timestamp of the last ingestion run.
- Summary cards show total update count and a breakdown by category.
- Each result shows the regulation reference, the parsed summary, and the AI-assigned category.
- Use **Add to Queue** to manually push a result into the Update Queue for review.
- Use **Export Results** to download the full result set as a CSV file.

12. Notifications

The Notifications page shows all alerts and activity notifications for your account. A badge on the bell icon in the navigation bar indicates how many unread notifications you have.

You will receive notifications when:

- A new reading assignment is created for you.
- An update you need to acknowledge has been approved and assigned.
- A student or instructor under your supervision completes (or fails to complete) an acknowledgement.
- The automated pipeline detects a new critical regulatory change.
- An admin action (user invite, settings change) is completed that affects your account.

Notification preferences (e.g. email vs. in-app) can be managed in your **Profile** page.

13. Settings / Admin Panel

The Settings page is the admin control centre for your organisation. It is only visible to users with the **Admin** role. Settings are organised into nine tabs.

Setup tab

The starting point for new organisations. Walks you through the minimum configuration required to make the platform operational: connecting RSS feeds, uploading a first flight book, configuring AI, and inviting users. A progress checklist shows which steps are complete.

Users tab

Invite new users to your organisation, change existing users' roles, or remove users. Enter an email address, select a role (Student, Instructor, or Admin), and click **Invite**. The invitee receives an email with a verification link and must confirm their address before first sign-in.

Note: You cannot self-assign an Admin role. A user must be promoted to Admin by an existing Admin.

Flight books tab

Manage the global flight book library from here as an admin: activate or deactivate documents, edit metadata, and assign documents to manual groups. Individual document uploads use the **Update (Upload)** page in the main navigation.

RSS feeds tab

Add and manage the RSS feed URLs that the ingestion pipeline monitors for EASA updates. Click **Seed defaults** to automatically populate the recommended set of official EASA feed URLs. Individual feeds can be toggled active/inactive without being deleted.

URL	The full RSS feed URL to monitor.
Type	Feed type — typically <i>rss</i> for standard RSS 2.0 feeds.
Active	Toggle to enable or disable monitoring of a feed without deleting it.

AI settings tab

Configure the AI provider and model used for impact assessments and change summarisation. EASA App supports multiple AI providers:

OpenAI	GPT-5, GPT-4o, and other OpenAI models. Requires an OpenAI API key.
Anthropic	Claude Opus, Sonnet, and Haiku. Requires an Anthropic API key.

Groq	Llama and Mixtral models via Groq's inference API.
Google Gemini	Gemini 2.0 Flash, 1.5 Pro, and 1.5 Flash. Requires a Google AI API key.

Enter your API key, select the provider and model, then click **Save**. API keys are stored securely and never exposed in the interface after saving.

Automation tab

Configure the automated ingestion pipeline that checks RSS feeds on a schedule.

Run time (UTC)	The time of day (in UTC) when the pipeline runs each day.
Runs per day	How many times per day the pipeline checks for new updates (1–4).
Enabled	Toggle the automation on or off without deleting the configuration.
Auto-approve low	Automatically approve AI-assessed low-impact changes without human review.
Auto-approve delay (h)	How long (in hours) the system waits before auto-approving a low-impact change.
Notify on detect	Send a notification to admins when a new update is detected.
Default export format	The default file format for exports: PDF or DOCX.

School profile tab

Customise the platform with your organisation's name, logo, and brand colours. These appear in the navigation header and on exported documents.

Onboarding tab

An interactive onboarding checklist for new organisations. Tracks setup progress and provides guided instructions for each step. Useful for onboarding new compliance managers or admins.

Exports tab

Generate and download compliance reports, acknowledgement records, and audit packs. All exports include timestamps and are signed with your organisation name for regulatory submission.

14. Definitions Glossary

The following terms are used throughout EASA App and this manual.

Acknowledgement	A user's recorded confirmation that they have read and understood a specific document section or regulatory update. Timestamped and immutable.
AMC	Acceptable Means of Compliance — documents published by EASA that describe ways to comply with the Basic Regulation and implementing rules, without being mandatory.
ATO	Approved Training Organisation — a flight school or aviation training entity that holds EASA Part-ORA approval to conduct regulated training courses.
Audit trail	The complete, timestamped log of every change, approval, and acknowledgement in the system. Required by EASA for document control and training record compliance.
Change type	The nature of a regulatory change: Amendment (modified text), New (added content), Deletion (removed content), or Clarification (updated guidance).
Compliance queue	See Update Queue.
Document control	The process of managing the creation, review, approval, distribution, and revision of documents in a controlled and auditable way — required by EASA Part-ORA.
EASA	European Union Aviation Safety Agency — the agency responsible for civil aviation safety regulation in the European Union.
Effective date	The date from which a particular version of a document or regulation applies operationally.
Flight book	Any aviation manual, procedure document, checklist, or training material stored and managed within EASA App.
Impact assessment	The AI-generated analysis of how a new EASA regulatory change affects specific sections of your existing manuals.
Ingestion pipeline	The automated background process that fetches EASA RSS feeds, parses new regulatory changes, and feeds them into the Update Queue.
Manual group	An organisational tag used to group related flight books together — e.g. 'PPL Fleet', 'ATPL Programme'.
Part-FCL	EASA regulation Part — Flight Crew Licensing. Covers pilot licences, ratings, certificates, and associated training requirements.

Part-MED	EASA regulation Part — Medical. Medical certification requirements for flight crew members.
Part-ORA	EASA regulation Part — Organisation Requirements for ATOs. The primary regulatory framework governing approved training organisations.
Part-ORO	EASA regulation Part — Organisation Requirements for Air Operations. Covers operational organisations.
Phase	A stage within a training programme — e.g. Ground School, Basic Flying, Advanced Flying.
Pipeline health	A status indicator (OK, Warning, Error) showing whether the last automated ingestion run completed successfully.
Programme	A top-level training course structure within EASA App — e.g. PPL(A), ATPL(A), IR(A). Contains phases and lessons.
RSS feed	Really Simple Syndication — a web feed format used by EASA to publish regulatory updates. EASA App monitors these feeds continuously.
Sign-off	A formal instructor confirmation that a student has satisfactorily completed a lesson objective. Immutable once recorded.
Time Machine	The version history browser in EASA App. Shows every version of every flight book section, who changed it, and when.
Update Queue	The list of pending EASA regulatory changes awaiting review, approval, and routing by your compliance team.
Version label	A human-readable identifier for a document version — e.g. 'Rev 3', 'Amdt 12', '2026-Q1'. Appears in exports and the Time Machine.

15. Frequently Asked Questions (FAQ)

Q: How do I add a new user to my organisation?

Go to Settings > Users tab. Enter the new user's email address, select their role (Student, Instructor, or Admin), then click Invite. They will receive a verification email and must confirm their address before they can log in.

Q: A student says they never received their invitation email. What should I do?

Ask them to check their spam or junk folder first. If the email is not there, go to Settings > Users, find the user, and use the re-send invite option. If the problem persists, check that the email address was entered correctly — delete the entry and re-invite with the correct address.

Q: How often does EASA App check for new regulatory updates?

By default the ingestion pipeline runs once per day at 06:00 UTC. Admins can change the run time and increase the frequency to up to four times per day in Settings > Automation.

Q: What happens if the pipeline shows an Error status on the Dashboard?

An Error status means the last automated run failed to complete. This is usually caused by a connectivity problem or an inactive RSS feed URL. Go to Settings > RSS Feeds and check that all active feed URLs are reachable. You can also click 'Aggregate' on the Changes page to manually trigger a fresh run.

Q: Can I use a different AI model for impact assessments?

Yes. Go to Settings > AI Settings. EASA App supports OpenAI (GPT-4o and newer), Anthropic (Claude), Groq (Llama/Mixtral), and Google Gemini. Enter your API key, select the provider and model, and save.

Q: How do I add official EASA RSS feeds without finding all the URLs manually?

Go to Settings > RSS Feeds and click Seed defaults. This automatically adds the full set of recommended official EASA RSS feed URLs in one click. You can then deactivate any feeds that are not relevant to your operation.

Q: Can a student acknowledge on a mobile phone?

Yes. EASA App is mobile-first for students. The reading and acknowledgement interface is fully optimised for smartphones. Students can read assigned material and acknowledge it in seconds from any device with a browser.

Q: What file formats can I upload for flight books?

EASA App accepts PDF and Word (.docx) documents. After upload the system extracts and indexes the text, making it searchable and linkable to training lessons.

Q: How do I restore a previous version of a flight book section?

Go to the Time Machine page. Locate the section and version you want to restore. Admin users will see a Restore option next to each version entry. Restoring creates a new version with the old content — the full history is preserved.

Q: What does 'auto-approve low-impact changes' mean and is it safe?

When this setting is enabled (Settings > Automation), the system automatically approves regulatory changes that the AI has assessed as low-impact after a configurable delay (default: 24 hours). This reduces manual workload for high-volume, minor clarifications. It is your organisation's responsibility to verify that the AI's impact assessment is correct for your operation. Many ATOs leave this off and review all changes manually.

Q: How do I generate a compliance report for an EASA audit?

Go to Settings > Exports. Select the type of report (e.g. Acknowledgement Record, Change Approval Log, Training Sign-off Summary), set the date range, and click Export. Reports are generated as PDF or DOCX depending on your default export format setting.

Q: What is the difference between the Update Queue and the Change List?

The Update Queue shows items that are waiting for your team to take action — review, approve, or reject. The Change List is the permanent historical record of every change ever detected, including ones already processed. Use the Update Queue for day-to-day compliance work; use the Change List for audits and research.

Q: Can I have multiple flight schools (organisations) under one EASA App account?

Each organisation has its own independent workspace. If you manage multiple ATOs, you would need a separate EASA App organisation account for each. Contact your account manager for multi-organisation pricing.

Q: Who can see the Settings page?

Only users with the Admin role can see and access the Settings page. It is hidden from all other roles.

Q: Is the acknowledgement record legally admissible as a training record?

EASA App generates timestamped, immutable acknowledgement records with the user's identity, the document version, and the exact date and time of acknowledgement. These records meet EASA Part-ORA requirements for training record-keeping. Always consult your national competent authority or legal advisor for specific admissibility questions in your jurisdiction.

Q: How do I change my organisation's branding or logo?

Go to Settings > School profile. Upload your logo, enter your organisation name, and set your brand primary colour. Changes take effect immediately across the platform and all exported documents.

Q: What should I do if I forget my password?

On the login page, click Forgot password. Enter your email address and you will receive a reset link. If you do not receive the email, check your spam folder or contact your organisation's Admin user.

EASA App

Compliance & Training Platform for ATOs

Version 1.0 · May 2026
